

WELCOME TO NAJMALUX

Come in. See light differently.

A walk through Najmalux.

Every project begins with a place.
Every lighting story begins with its possibilities.

Lighting solutions. Confidence to specify.

WELCOME TO NAJMALUX

Your route through Najmalux.

Step inside. Start with the space.
Leave with a clearer way forward.

Before a luminaire is selected, there is a client with a vision: a home that feels welcoming, a workplace that supports its people, a hotel with a memorable atmosphere. The consultant's task is to turn that vision into decisions that can be explained, specified and delivered.

Najmalux Investments LLC brings aesthetically refined, commercially viable lighting solutions to Oman. Backed by decades of industry experience and our authorized-dealer relationship with Emitron Lighting UK, we connect design understanding, product choice and local project support.

This is your invitation to explore that connection. Begin with what light can bring to a space. Look closer at its quality. Review the evidence. Then bring your own project into the conversation.

01	Experience Imagine the space.	03–05	02	Look closer Understand the quality.	06–07
03	Find confidence Review the evidence and choice.	08–09	04	See it in practice Explore relevant experience.	10–11
05	Build with us Bring the brief to life.	12–13	06	Take it forward Plan delivery and continuing support.	14–16

01 / EXPERIENCE

First, imagine the space.

A threshold. A first impression.
A reason to stay a little longer.

Imagine arriving at a hotel after sunset. The entrance draws you towards it. Light reveals the texture of a wall, gives a reception desk its presence and lets the quieter corners remain calm. Before you have studied a single fixture, you have already experienced the lighting.

Now imagine the same care in a residential lobby, an office or a retail interior. Each setting asks for something different: welcome, concentration, identity or emphasis. A successful proposal begins by understanding that purpose.

At Najmalux, we bring the architectural brief and the practical requirements into the same conversation. For your client, this means a lighting direction connected to the way the space will be used and experienced.

THE FIRST IMPRESSION

Start with the experience.
Let the product selection follow the purpose.

→ Discover how different layers build that experience.

01 / EXPERIENCE

One space. Different layers.

Walk further in. Notice how the lighting changes with the task, the detail and the mood.

A meeting room, a display wall and a lounge may sit within the same building, yet their lighting needs differ. We help bring those needs into a coordinated selection, balancing useful illumination with the architecture and the character your client wants to create.

01 / THE FOUNDATION

Light to use the space.

Backlit panels, ceiling and surface-mounted fixtures support functional areas. Clean-room fittings address more specific environments. Selection follows the task and the project requirements.

02 / THE FOCUS

Light to reveal the architecture.

Downlights, spotlights, adjustable fixtures, wall washers and sconces give the designer ways to direct attention and bring architectural detail into view.

03 / THE IDENTITY

Light to give it character.

Chandeliers, decorative and suspended fittings, LED strip, linear profiles and magnetic track systems extend the vocabulary of the design.

Homes, hotels, offices and retail spaces.
A considered lighting offer for each brief.

→ Carry the same design thinking beyond the doorway.

01 / EXPERIENCE

Step outside.

The building's lighting story continues into the landscape.

Follow the path away from the entrance. A planted edge, a courtyard and the route back to the building each become part of the wider experience. Bollards, spike lights, pathway fittings and in-ground uplights offer different ways to develop that outdoor brief.

Move further across the site and the requirements change again. Flood and stadium lighting, industrial luminaires, street lighting and infrastructure solutions call for selection around the task, the installation environment and the project specification.

Across different settings.

Residential complexes, hotels and resorts, commercial buildings, retail, industrial facilities and public infrastructure.

For specialist needs.

Explosion-proof luminaires and emergency/exit fittings, with applicable models and approval documentation matched to the project.

The supplied profile references Civil Defence-approved emergency/exit fittings. Confirm the applicable model and approval scope.

→ The effect is visible. Now look at the quality behind it.

02 / LOOK CLOSER

Good light has a signature.

Look beyond the form of the fixture.
Bring the quality of its light into the decision.

As the lighting scheme becomes more defined, the consultant needs a clear language for comparing the proposed options. Our premium-light offer brings colour consistency, colour rendering and photobiological classification into that review.

≤ 3

Colour that belongs together.

SDCM ≤ 3 is the stated colour-consistency rating for the applicable premium models. Review it when coordinating luminaires across the same space or architectural surface.

>80
/
 >90

Colour rendering for the brief.

CRI >80 and CRI >90 options allow the proposed selection to respond to the project's colour-rendering requirements. Identify the required option within the specification.

RG0

A defined risk classification.

RG0 is the stated photobiological risk group for applicable premium models. Match that claim to the selected luminaire's supporting documentation.

For your client, these details give the lighting choice a clearer basis. For you, they make the discussion more precise: the proposed model, the required performance and the evidence that connects them.

Ratings vary by model and option. Confirm all three against the selected luminaire's data and test documentation.

→ [Open the fixture's engineering story.](#)

02 / LOOK CLOSER

Behind the light, an engineering decision.

The appearance attracts attention.

The component choices support the specification.

A lighting proposal carries expectations beyond the day it is installed. The LED, driver and housing all belong in the review, along with the conditions in which the fitting will operate. In partnership with Emitron UK, our offer places component quality and consistent performance at the centre of selection.

50,000

HOURS · L80/B10
STANDARD FIXTURES

The LED.

Premium chips are selected for colour consistency and luminous efficacy, with the quality of light considered against the application.

The driver.

Industrial-grade drivers support stable operation, flicker control and protection against voltage fluctuations. Electrical and control compatibility remain part of the selection.

The housing.

Thermal management considers demanding GCC conditions. The fixture's operating limits must suit the actual installation environment.

The rated life.

Standard fixtures carry a 50,000-hour L80/B10 rated-life specification, subject to the selected model and operating conditions.

Together, these choices help turn a preferred appearance into a considered technical proposal. Rated operating life and the five-year warranty remain separate parts of that proposal.

→ [Bring the supporting evidence into view.](#)

03 / FIND CONFIDENCE

Open the evidence.

Confidence grows when the supporting information matches the proposed product.

You have seen the lighting possibilities and the engineering themes. The next stop is the evidence behind the offer. For a consultant, a credential becomes useful when its holder, scope and relevance to the proposed selection are clear.

The existing Najmalux profile includes the references below. Use them as the starting point for a review of the applicable manufacturer, product and supporting documents.

ISO 9001:2015

TÜV SÜD

SASO

CB / IECEE

CE

ENEC

Design recognition.

Red Dot 2020.

Design Award · Winner

German Design Award 2021.

Gold

Certification, conformity and design recognition tell different parts of the story. The client recommendation should connect each relevant reference to the product or organization it actually covers.

Review edition: certificate holders, product scope, validity where relevant and award-recipient attribution remain to be confirmed.

03 / FIND CONFIDENCE

More possibilities. A considered choice.

The value of choice is finding
the right solution for the brief.

No two projects ask exactly the same things of their lighting. Architecture, performance, budget and operating priorities all shape the selection. Our authorized-dealer relationship with Emitron Lighting UK brings international lighting expertise and technology into our Oman offer.

Our strategic partnership.
Authorized dealer · Oman market.

The old profile also identifies a wider network of brand affiliations:

GRINSAFE	JCC / Leviton	AJV
LUG	Disano	Fosnova
LENA	FOCUS	L&B
LUXIONA	Raytec	PLUS

Our reasons to consider Najmalux come together here: premium components and rated-life performance; five-year warranty and after-sales support; access to international technology; and energy-efficient solutions, including LED upgrades.

For the client, the opportunity is to align design quality with functional needs and commercial priorities. For the consultant, it is a basis for comparing proposed products, energy use, scope and warranty terms within the actual project.

Confirm representation scope, model suitability and availability for the project.

→ Connect the offer to relevant project experience.

04 / SEE IT IN PRACTICE

From a welcome to a lighting design.

Jabel Shifa · Three-bedroom farmhouse.
A residential lighting design study.

Jabel Shifa 3BR Type A · DIALux design rendering.
Source: lighting design report, page 1.

Villa inspiration reference.
Source: supplied image.

Step into a home where the lighting has to work from the entrance through the living spaces and bedrooms, then continue outdoors. The Jabel Shifa 3BR Type A study brings that journey into a DIALux model, connecting the room arrangement with the proposed luminaires and their calculated light.

The report includes interior and exterior visualizations, luminaire layouts, product schedules and room calculations. Prepared with Najmalux contact details and dated 7 September 2026, it gives the consultant material to discuss both the intended atmosphere and the technical selection with the client.

Attribution of these wider names to Najmalux, partners or earlier experience remains to be confirmed. The two supplied reports separately identify Najmalux contact details.

→ Bring your own brief into the conversation.

05 / BUILD WITH US

Now, bring your own brief.

The possibilities become a proposal when they are connected to your project.

We have explored the spaces, the quality and the evidence. Now the route turns towards your client's needs. Najmalux's services connect the early design conversation to product selection and the practical details of delivery.

01 Understand the brief.

Lighting design and consultation begin with the architecture, the activities within the space and the client's priorities. The aim is to bring functional performance and the intended character into the same solution.

02 Develop the solution.

Product selection brings the lighting intent into a coordinated offer. Where a particular architectural requirement calls for it, custom fixture fabrication provides a route to a tailored solution.

03 Consider the upgrade.

For an existing building, energy audits and LED upgrades create a different starting point: understand the installed system and assess an efficient response against operational and commercial priorities.

04 Carry it into delivery.

Product supply, installation coordination and commissioning support connect the agreed proposal to the completed space. Scope, responsibilities and programme are aligned for the project.

→ Meet the direction that guides our work.

05 / BUILD WITH US

The direction behind every decision.

Our ambition is built around trust.
Our mission keeps the project in view.

The choices made along this journey belong to a wider purpose. Najmalux's vision looks towards a trusted place in the GCC lighting market. Our mission connects that ambition to the solutions and service we aim to provide for each client.

OUR VISION

To become the most trusted lighting solutions provider in the GCC by setting benchmarks in innovation, quality, and customer satisfaction.

OUR MISSION

01 Provide energy-efficient and sustainable lighting solutions.

02 Deliver customized designs tailored to client needs.

03 Ensure exceptional service from concept to completion.

For the consultant introducing Najmalux, this is the direction behind the offer: a lighting partner seeking to connect thoughtful design, quality and continuing service around the needs of the project.

→ See how the relationship continues after handover.

06 / TAKE IT FORWARD

After the lights come on, we stay.

Handover is a milestone.
The client's use of the space continues.

Once the installation is complete, lighting becomes part of the building's everyday life. The client still needs a clear point of contact and an understanding of the assurance that accompanies the selected products.

5 YEAR PRODUCT WARRANTY

Najmalux's five-year product warranty and dedicated after-sales support are part of the value we bring to that continuing relationship. Our local presence provides a point of contact for product discussions and support after delivery.

For the consultant, the warranty belongs in the client conversation from the outset. Review the applicable coverage and written terms alongside the proposed models, so the assurance is clear before the order is placed.

Warranty coverage follows the applicable written terms. The 50,000-hour L80/B10 rated life is a separate performance specification, subject to model and operating conditions.

→ Take a seat. Let's plan your project together.

06 / TAKE IT FORWARD

Pull up a chair. Let's plan your project.

Bring the brief, the drawings
and the decisions your client needs to make.

You have followed the route from the first impression of a space to the details behind its lighting. The next step is to turn those possibilities into a proposal that fits your client's project.

At the project table, the conversation brings four things together. We begin with the brief, examine the proposed selection, define the delivery scope and clarify the support that follows.

Design and technical support, sales engineering, operations and logistics, and after-sales support each have a part in that discussion. Together, they connect the idea, the product and the practical scope.

A clear proposal gives you a clearer introduction:
why this lighting, for this client, in this project.

→ Start the conversation with Najmalux.

06 / TAKE IT FORWARD

The next stop is your project.

Thank you for walking with us.
Now let's talk about the space you have in mind.

Perhaps the brief is already detailed. Perhaps your client is still exploring what the building could become. Bring us the drawings, the lighting priorities and the questions that need answers.

Najmalux brings design understanding, product choice and local project support into that conversation. From the first idea to the completed installation and after-sales relationship, our aim is to help you shape a considered lighting solution for your client.
